PROPERLY HANGING EQUIPMENT FROM WALLS

For equipment that will be permanently installed in the building, we recommend using the following types of screws:

Diameter: #14
Drive: Hex Slotted
Grade: 18-8
Head: Indented Hex Washer
Length: 1"
Material: Stainless Steel
Point: Type A
Thread Size: 10
Type: Sheet Metal Screw
Fastenal Part #: 73153

Diameter: #10
Drive: Hex - Unslotted
Finish: Epoxy
Grade: 410
Head: Indented Hex Washer
Length: 1-1/2"
Material: Stainless Steel
Point: #3
Thread Size: 16
Type: Self-Drilling Screw
Fastenal Part #: 31954

For equipment that will either be temporary installed or will need to be moved at some point, we recommend installing U-Channel supports, using the above #14 type screw every 12" to 6", depending on the weight.

For heavy items, please call to discuss prior to hanging. Some of our buildings are constructed with wood incased in the walls, some are not. Buildings without wood in the walls require a different approach for heavy objects than simply screwing them to the walls.

For questions or additional assistance, please call 314-664-9300
