

**25 Year
Warranty**

The One That Survived Was Built by Us!

In September of 2005, Hurricane Rita swept through Texas and Louisiana and caused over \$12 billion in damages. In the aftermath of this fourth-most intense hurricane, one of our representatives in Louisiana sent us these photos and said, "The enclosure did not even have a ding on it, even though there was ample damage to houses, trees, etc. in the immediate area. You need to start claiming that your enclosures are 'hurricane-proof'!"

Now we can!

While all Shelter Works® enclosures are designed utilizing our exclusive FiberBeam Technology™ and built to withstand Mother Nature at her most extreme, we previously hadn't had them certified as such.

**This metal building was in
the path of Hurricane Rita**

**So was this
Shelter Works shelter!**

Now we do! In 2012, one of our customers had a need to have their Shelter Works fiberglass building rated to withstand 160 mph wind loads by an independent Professional Engineer in the State of Florida. When hurricanes rip through a town, our customers need to have confidence that their critical field equipment is protected - even in a Category Five Hurricane!

When you need performance in the most extreme conditions possible, give us a call. Every Shelter Works enclosure is backed by the strongest guarantee in the industry to protect your critical field equipment.

To find out how you can gain the peace of mind that only a Shelter Works shelter can provide - contact us at 800-794-8037 or visit www.shelterworks.com.
